Welcome to Muralinko's visual brand style guide. This guide is designed to capture the core of our brand and ensure that our visual identity remains consistent and recognisable in every expression. Whether you're working on a website, a social media post or an ad campaign, this guide will help you bring our brand to life the right way.

Follow these guidelines to ensure we always make a cohesive and professional impression wherever we are visible.

Logo versions

Our logo is the most recognisable element of our brand and a powerful symbol of the Muralinko identity.

The symbol's tilted square evokes a wall in perspective while tracing an 'M', and its right and bottom strokes hint at the vertical printer on rails—together forming a distinctive, service-focused mark. Its accompanying lowercase logotype feels modern and structured yet subtly luxurious.

Overall, the design balances geometric clarity with minimal elegance, ensuring the logo reads crisply at any scale and stands strong on its own or alongside supporting graphics.

Examples

To be at its best, our logo needs sufficient space. We have established specific guidelines to ensure that other elements do not interfere with this space.

Always maintain at least the specified white space when using the logo.

This white space is based on the height and width of the symbol divided by two. If a version of the logo without the symbol is used, the minimum white space should be based on the height and width of the 'o'.

Logo size

For optimum legibility in digital and printed applications, the Muralinko logo should not be displayed smaller than the dimensions indicated.

If space is too limited for the full logo, use the symbol.

- *When placed alone in a circle or square, the symbol is not mathematically centered due to its asymmetrical structure: a heavier vertical on the left and a lighter shape with a protruding line on the right. To correct this visually, the third vertical stroke (the right stroke of the 'M') is aligned with the vertical center of the container, creating a balanced appearance.*

Primary colors

In addition to the logo, brand colors are an essential part of our brand identity. We distinguish between primary colors, which are the main colors of our brand, and secondary colors, which add additional depth and variety.

We apply a 60/30/10 distribution to the three primary colors, providing a clear visual hierarchy. Depending on the context—such as dark mode or light mode layouts—the roles of the 60% and 30% colors may be swapped to maintain contrast and readability, while still preserving overall brand consistency.

Mint is perfect to highlight important information or add extra vibrancy.

- **HEX:** A six-digit code representing colors for web and digital design.
- **RGB:** Used for digital screens by combining light to create colors.
- **CMYK:** Used in printing by combining inks to produce colors.
- **PMS:** Pantone Matching System. A standardized color system used in printing to ensure consistent color reproduction across different processes.

Secondary colors

These secondary colors are lighter tints of each primary hue (white excluded) and are purely optional—never required for core brand assets. They exist to complement, not compete with, your primary palette.

Apply these sparingly to preserve brand impact. Overusing secondary tones can weaken recognition.

Best Practices:

- Reserve for accents: frames, icons, infographics, or small graphic details.
- Avoid large background areas filled with secondary colors.

By limiting their use to highlights and accents, you'll maintain a clear, consistent brand presence.

Logo colors

Our logo can be applied in Midnight Green, white or mint.

Choose the logo color based on the elements in your communication materials to ensure maximum contrast and good readability. Make sure the logo has sufficient contrast, especially when it is placed on a photograph.

Improper use

Avoid items like the one shown here to ensure visual consistency and coherence of the brand.

Typography

The visual identity of our brand relies on thoughtful typography to ensure consistency and impact.

HEADLINES - Contralto Small

For headlines and high-visibility expressions, we use Contralto Small; a high-contrast sans-serif display font that combines elegance with strength. Typically, Contralto Small Bold is deployed for maximum impact, but other weights may be used to establish hierarchy and reading rhythm.

In rare cases where enhanced readability is required, **Contralto XSmall** may be more appropriate. However, in most circumstances, Contralto Small suffices.

BODY COPY - Inter

Our second font is Inter, chosen for optimal readability on both screen and print. We primarily use Inter Light for running text, and use Inter Bold to add emphasis or visual variation.

Both fonts are available under an Open Source license:

- fonts.adobe.com/fonts/contralto
- fonts.google.com/specimen/Inter

Type hierarchy

Follow these guidelines when writing and designing to ensure readability and proper hierarchy.

Typography hierarchy helps structure information, presenting important elements clearly and making the text easier to read.

By using consistent font sizes and styles, you improve communication and the visual appeal of your design.

- **When using dark body copy text**
on a **white background** we recommend using font *Inter Light*.
- **When using white body copy text**
on a **dark background**, or very small text, we recommend using font *Inter Regular*.
- When pairing two font weights, jump at least one step, like going from *Light* straight to *Bold* instead of *Light* to *Regular*, to create clear contrast and guide the reader's eye.

- Graphic elements
- Examples

Graphic elements reinforce our brand's visual identity.

When using photos, cut off one corner at the same angle as the symbol (27° or 153°). You can treat that angle as either the border of the layout or the edge of the photo itself.

To add depth to a plain-color layout field, use slim, outlined versions of the symbol lines—just thick enough to be visible but still subtle.

- *To keep layouts playful, minimal, and professional, we recommend using no more than one graphic element per layout. In most cases, a single treatment alongside your main content will suffice.*

- Photo frame (Random size)
- Layout field (Random size)

Examples

Here are some examples of how all these elements can be used together in Muralinko layouts.
